

## **ARTIST STATEMENT**

Is a penis a phallus?  
Is a highrise a phallus?  
Is a phallus a penis?

Are all verticals phalli?  
No, are all prestigious verticals phalli?

Is a vertical megapolis like Hong Kong a pure male city?  
Will my vertical body turns into a phallic form?

No! My photographs show not any phalli.  
Yet, my photographs show super high, twisted, hairy hanging, crooked, fallen, multitudes and testo  
junky phalli.  
Who is the recipient?  
How many various contents can an image store?

From my perspective large cities navigate to a post-materialistic, post-bodily resp. post-gender form.  
The navigation through a built city, functions similar today like the navigation with computers through  
an architecture rendering. The city turns into a two-dimensional interface, while the corporeality gives  
way to a smart digital complete network. Yet still, it seems, while listening to some recipients of my  
images, that the domination of the phallic projection on architecture, on space also thousands of years  
after its beginning has not been overcome.
